

ASHP Pharmacy Advancement Initiative (PAI) 2030: How Can You Drive Pharmacy Practice Change at a Local Level?

Amanda Meyer, PharmD

The American Society of Health System Pharmacists (ASHP) Practice Advancement Initiative 2030 (PAI 2030) provides pharmacy teams with guidance for advancing healthcare, patient outcomes, and pharmacy practice. PAI 2030 includes five primary domains with 59 recommendations to promote optimal, safe, effective medication use; expand pharmacist and technician roles; and implement the latest technologies. ASHP has also developed a Self-Assessment Tool to help you determine how well your practice setting aligns with the PAI 2030 recommendations. The tool identifies areas where the PAI 2030 recommendations could have the biggest impact on your practice setting.

The Five PAI 2030 Domains:

- Patient-Centered Care
- Pharmacist Role, Education, and Training
- Technology and Data Science
- Pharmacy Technician Role, Education, and Training
- Leadership in Medication Use and Safety

In this roundtable, we will review the Pharmacy Advancement Initiative primary domains and recommendations to assess the current state of your site and provide ideas on ways you can advance pharmacy practice and shape the profession!
